

Risk stratified follow-up pathway for curative Hodgkin Lymphoma patients who obtain complete remission with initial therapy

Supplementary Guidance

Final review prior to discharge should be face to face and should include full clinical examination.
 Decision to discharge should only be made following discussion with Consultant and should be noted in discharge communication to GP.
 End of treatment summary should only be completed at end of treatment and is not required for discharge from service.
 Patients who are discharged can access the service if required via their GP.
