### Red Flag referral, patients:
- Refer as red flag for breast cancer if they are:
  - aged 30 and over and have an unexplained (see note below) breast lump with or without pain or
  - aged 50 and over with any of the following symptoms in one nipple only:
    - discharge
    - retraction
    - Other changes of concern.

- Consider a red flag referral (for an appointment within 2 weeks) for breast cancer in people:
  - with skin changes that suggest breast cancer or
  - Aged 30 and over with an unexplained lump in the axilla.

Consider non-urgent referral in people aged under 30 with an *unexplained* breast lump with or without pain. Note: Discussion with a specialist (e.g. by telephone or email) should be considered if there is uncertainty about the interpretation of symptoms and signs, and whether a referral is needed. This may also enable the primary healthcare professional to communicate their concerns and a sense of urgency to secondary healthcare professionals when symptoms are not classical.

*Unexplained* : Symptoms or signs that have not led to a diagnosis being made by the healthcare professional in primary care after initial assessment (including history, examination and any primary care investigations).

### BRAIN AND CNS CANCER

<table>
<thead>
<tr>
<th>Red Flag referral, patients:</th>
</tr>
</thead>
<tbody>
<tr>
<td>▪ symptoms related to the CNS, including:</td>
</tr>
<tr>
<td>- progressive neurological deficit</td>
</tr>
<tr>
<td>- new-onset seizures</td>
</tr>
<tr>
<td>- headaches</td>
</tr>
<tr>
<td>- mental changes</td>
</tr>
<tr>
<td>- cranial nerve palsy</td>
</tr>
<tr>
<td>- unilateral sensorineural deafness in whom a brain tumour is suspected</td>
</tr>
<tr>
<td>▪ headaches of recent onset accompanied by features suggestive of raised intracranial pressure, for example:</td>
</tr>
<tr>
<td>- vomiting</td>
</tr>
<tr>
<td>- drowsiness</td>
</tr>
<tr>
<td>- posture-related headache</td>
</tr>
<tr>
<td>- pulse-synchronous tinnitus</td>
</tr>
<tr>
<td>- by other focal or non-focal neurological symptoms, for example blackout, change in personality or memory</td>
</tr>
<tr>
<td>▪ a new, qualitatively different, unexplained headache that becomes progressively severe</td>
</tr>
<tr>
<td>▪ Suspected recent-onset seizures (refer to neurologist).</td>
</tr>
</tbody>
</table>

Consider red flag referral (to an appropriate specialist) in patients with rapid progression of:
- subacute focal neurological deficit
- unexplained cognitive impairment, behavioural disturbance or slowness, or a combination of these
- Personality changes confirmed by a witness and for which there is no reasonable explanation even in the absence of the other symptoms and signs of a brain tumour.

### COLORECTAL/LOWER GI CANCER

Please follow the NICaN Lower GI Suspected Cancer Pathway ([appendix 1](#)) and use qFIT to ensure appropriate prioritisation of your patient. We would request the following steps are taken against relevant symptoms after assessment and investigation in primary care.

- **Rectal, Abdominal or Anal Mass**: Refer as red flag, arrange qFIT, mention qFIT requested on referral. Result will be picked up by secondary care.
- **Proven Iron Deficiency Anaemia**: Refer as red flag, arrange qFIT, mention qFIT requested on referral. Result will be picked up by secondary care.
- **Persistent Change in bowel habit towards looser stool for >4 weeks**: Arrange a qFIT and if result is positive refer red flag. If result is negative consider referral on an urgent basis or as appropriate undertake safety netting considering red flag referral if persistent or progressive symptoms exist on primary care review.
- **Abdominal pain with weight loss**: (Please also consider if Upper GI referral might be more appropriate.) Arrange a qFIT and if result is positive refer red flag. If result is negative, undertake appropriate safety netting and consider red flag referral if persistent or progressive symptoms exist on primary care review.
- **Normocytic anaemia + lower abdominal symptoms**: Arrange a qFIT and if result is positive refer red flag. If result is negative, undertake appropriate safety netting and consider red flag referral if persistent or progressive results/symptoms exist on primary care review.
<table>
<thead>
<tr>
<th>GYNAECOLOGY CANCER</th>
<th>HAEMATOLOGY CANCER</th>
<th>HEAD AND NECK CANcer INCLUDING THYROID CANcer CONT'D.</th>
</tr>
</thead>
</table>
| **Red Flag referral, patients:** | **Combinations of the following symptoms and signs warrant full examination, further investigation (including a blood count and film) and possible referral:** | For patients with persistent symptoms or signs related to the oral cavity in whom a definitive diagnosis of a benign lesion cannot be made, refer to follow up until the symptoms and signs disappear. If the symptoms and signs have not disappeared after 6 weeks, make an urgent referral. Red Flag referral to a dentist:  
- patients with unexplained tooth mobility persisting for more than 3 weeks – monitor for oral cancer patients with confirmed oral lichen planus, as part of routine dental examination. Advise all patients, including those with dentures, to have regular dental check-ups.  
**Red Flag referral for a Chest X-ray:**  
- patients with hoarseness persisting for more than 3 weeks, particularly smokers aged older than 50 years and heavy drinkers – if there is a positive finding, refer urgently to a team specialising in the management of lung cancer. If there is a negative finding, refer urgently to a team specialising in head and neck cancer.  
**Non-urgent referral:**  
- a patient with unexplained red and white patches of the oral mucosa that are not painful, swollen or bleeding (including suspected lichen planus). |  |
| - with clinical features suggestive of cervical cancer on examination. A smear test is not required before referral, and a previous negative result should not delay referral | - fatigue  
- drenching night sweats  
- fever  
- weight loss  
- generalised itching |  |
| - not on hormone replacement therapy with postmenopausal bleeding | - breathlessness  
- bruising  
- bleeding  
- recurrent infections  
- bone pain |  |
| - on hormone replacement therapy with persistent or unexplained postmenopausal bleeding after cessation of hormone replacement therapy for 6 weeks | |  |
| - taking tamoxifen with postmenopausal bleeding | |  |
| - with an unexplained vulval lump | |  |
| - with vulval bleeding due to ulceration. Consider red flag referral for patients with persistent intermenstrual bleeding and negative pelvic examination | |  |
| **Red Flag referral for an ultrasound scan, patients:** | |  |
| - with a palpable abdominal or pelvic mass on examination that is not obviously uterine fibroids or not of gastrointestinal or urological origin. If the scan is suggestive of cancer, an urgent referral should be made. | |  |
| - if there is a | |  |
| negative finding, refer urgently to a team | |  |
| specialising in head and neck cancer. | |  |
| **Ovarian Cancer** | |  |
| - Following clinical history and pelvic examination if ovarian cancer is suspected measure CA125. If ≥35 IU/ml arrange an ultrasound of pelvis and abdomen / refer as red flag. | |  |
| [Please note: CA125 should not be ordered without a pelvic examination] | |  |
### LUNG CANCER

**Immediate referral, patients with:**
- signs of superior vena caval obstruction (swelling of the face/neck with fixed elevation of jugular venous pressure)
- stridor

**Red Flag referral, patients with:**
- persistent haemoptysis (in smokers or ex-smokers aged 40 years and older)
- a chest X-ray suggestive of lung cancer (including pleural effusion and slowly resolving consolidation)
- a normal chest X-ray where there is a high suspicion of lung cancer
- a history of asbestos exposure and recent onset of chest pain, shortness of breath or unexplained systemic symptoms where a chest X-ray indicates pleural effusion, pleural mass or any suspicious lung pathology

**Urgent chest X-ray (the report should be returned within 5 days) for patients with any of the following:**
- haemoptysis
- unexplained or persistent (longer than 3 weeks):
  - chest and/or shoulder pain
  - dyspnoea
  - weight loss
  - chest signs
  - hoarseness
  - finger clubbing
  - cervical or supraclavicular lymphadenopathy
  - cough
  - features suggestive of metastasis from a lung cancer (for example, secondaries in the brain, bone, liver, skin)
- underlying chronic respiratory problems with unexplained changes in existing symptoms.

**Red Flag referral (Melanoma), patients with:**
- a lesion suspected to be melanoma. (Excision in primary care should be avoided.)

**Red Flag referral (Squamous cell carcinomas), patients:**
- with non-healing keratinizing or crusted tumours larger than 1 cm with significant induration on palpation. They are commonly found on the face, scalp or back of the hand with a documented expansion over 8 weeks.
- who have had an organ transplant and develop new or growing cutaneous lesions as squamous cell carcinoma is common with immunosuppression but may be atypical and aggressive
- with histological diagnosis of a squamous cell carcinoma

**Non-urgent referral (Basal cell carcinomas):**
- Basal cell carcinomas are slow growing, usually without significant expansion over 2 months, and usually occur on the face. If basal cell carcinoma is suspected, refer non-urgently.

### SKIN CANCER

**Red Flag referral**
- for endoscopy/referral to specialist, patients of any age with dyspepsia and any of the following:
  - chronic gastrointestinal bleeding
  - dysphagia
  - progressive unintentional weight loss
  - persistent vomiting
  - iron deficiency anaemia
  - epigastric mass
  - suspicious barium meal results

**Red Flag referral for patients presenting with:**
- dysphagia
- unexplained upper abdominal pain and weight loss, with or without back pain
- upper abdominal mass without dyspepsia
- obstructive jaundice (depending on clinical state) – consider urgent ultrasound if available

**Consider red flag referral for patients presenting with:**
- persistent vomiting and weight loss in the absence of dyspepsia

### UPPER GI

**Upper GI Continued**
- unexplained weight loss or iron deficiency anaemia in the absence of dyspepsia
- unexplained worsening of dyspepsia and:
  - Barrett’s oesophagus
  - Known dysplasia, atrophic gastritis or intestinal metaplasia
  - Peptic ulcer surgery over 20 years ago

**Urgent endoscopy:**
- Patients aged 55 years and older with unexplained and persistent recent-onset dyspepsia alone.

### UROLOGY

**Consider a prostate specific antigen (PSA) test and digital rectal examination to assess for prostate cancer in men with:**
- Any lower urinary tract symptoms such as nocturia, urinary frequency, hesitancy, urgency, or retention OR
- Erectile dysfunction OR
- Visible haematuria

**Do NOT do a PSA in men with a suspected or confirmed urinary tract infection(UTI)**

**Red Flag referral (Prostate), patients:**
- Refer as suspect cancer if the prostate feels malignant on digital rectal examination.
- Refer as suspect cancer on the basis of a single PSA result if the level is >20 µg/L
- Refer as a suspected cancer (for an appointment within 2 weeks) if PSA levels are above the referral range (as detailed below), at both initial testing and when repeated again at between 2-4 weeks later.

**Age** | **PSA Referral Range**
---|---
Below 40yrs | Use clinical judgement
40 – 49 | More than 2.5µg/L
50 - 59 | More than 3.5 µg/L
60-69 | More than 4.5 µg/L
70 - 79 | More than 6.5µg/L
Above 79 years | Use clinical judgement

**Breast and Prostate PSA thresholds**

<table>
<thead>
<tr>
<th>Age</th>
<th>PSA Referral Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>More than</td>
<td>4.5 µg/L</td>
</tr>
<tr>
<td>More than</td>
<td>4.0 µg/L</td>
</tr>
<tr>
<td>More than</td>
<td>6.0 µg/L</td>
</tr>
<tr>
<td>More than</td>
<td>7.5 µg/L</td>
</tr>
<tr>
<td>More than</td>
<td>9.0 µg/L</td>
</tr>
<tr>
<td>More than</td>
<td>12 µg/L</td>
</tr>
</tbody>
</table>

**Note:**
- Basal cell carcinomas are slow growing, usually without significant expansion over 8 weeks.
- The development of new or growing cutaneous lesions is common with immunosuppression but may be atypical and aggressive.
- Basal cell carcinomas are slow growing, usually without significant expansion over 8 weeks.
- If basal cell carcinoma is suspected, refer non-urgently.
### Urology Continued

**Red Flag referral (Bladder):**
- aged 45 and over and have:
  - unexplained visible haematuria without urinary tract infection or
  - visible haematuria that persists or recurs after successful treatment of urinary tract infection, or
- aged 60 and over and have unexplained non-visible haematuria and either dysuria or a raised white cell count on a blood test.

**Red Flag referral (Renal):**
If they are aged 45 and over and have:
- unexplained visible haematuria without urinary tract infection or
- visible haematuria that persists or recurs after successful treatment of urinary tract infection.

Of any age with abdominal mass identified on imaging that is thought to arise from the urinary tract.

**Non Red Flag (Bladder and Renal)**
Consider non-urgent referral for
- Patients aged 60 and over with recurrent or persistent unexplained urinary tract infection.
- Patients under 60 years of age with persistent microscopic haematuria.
- Patients with proteinuria raised serum Creatinine should be referred to a renal physician. If there is no proteinuria and serum creatinine is normal, a non-urgent referral to an urologist should be made.

**Red Flag referral (Testicular), patients:**
- with a swelling or mass in the body of the testis.

**Red Flag referral (Penile), patients:**
- with symptoms or signs of penile cancer. These include progressive ulceration or a mass in the glans or prepuce particularly, but can involve the skin of the penile shaft. (Lumps within the corpora cavernosa can indicate Peyronie’s disease, which does not require urgent referral.)

### Cancer in Children and Young People

- Consider referral when a child or young person presents with persistent back pain (an examination is needed and a full blood count and blood film). Persistent parental anxiety is sufficient reason for referral, even where a benign cause is considered most likely. Take into account parental insight and knowledge when considering urgent referral.
- Refer urgently when a child or young person presents several times (for example, three or more times) with the same problem, but with no clear diagnosis (investigations should also be carried out).

There are associations between Down’s syndrome and leukaemia, between neurofibromatosis and CNS tumours, and between other rare syndromes and some cancers. Be alert to the potential significance of unexplained symptoms in children with such syndromes.

**Leukaemia (children of all ages)**
Immediate referral, children or young people with either:
- Unexplained petechiae, or
- Hepatosplenomegaly

**Lymphomas**
Immediate referral, children or young people with either:
- Hepatosplenomegaly, or
- Mediastinal or hilar mass on chest X-ray

Red flag referral, children or young people:
With one or more of the following (particularly if there is no evidence of local infection):
- non-tender, firm or hard lymph nodes
- lymph nodes greater than 2 cm in size
- lymph nodes progressively enlarging
- other features of general ill-health, fever or weight loss
- axillary node involvement (in the absence of local infection or dermatitis)
- supraclavicular node involvement
- with shortness of breath and unexplained petechiae or hepatosplenomegaly (particularly if not responding to bronchodilators).
### Cancer in Children and Young People Cont’d

<table>
<thead>
<tr>
<th>Brain and CNS Tumours</th>
<th>Neuroblastoma (All Ages)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Immediate referral, children or young people with:</td>
<td>Red flag referral, children with:</td>
</tr>
<tr>
<td>- a reduced level of consciousness</td>
<td>- proptosis</td>
</tr>
<tr>
<td>- headache and vomiting that cause early morning waking or occur on waking as these are classical signs of raised intracranial pressure.</td>
<td>- unexplained back pain</td>
</tr>
<tr>
<td>Immediate referral, children aged younger than 2 years with any of the following symptoms:</td>
<td>- leg weakness</td>
</tr>
<tr>
<td>- new-onset seizures</td>
<td>- unexplained urinary retention</td>
</tr>
<tr>
<td>- bulging fontanelle</td>
<td></td>
</tr>
<tr>

<td></td>
</tr>
<tr>
<td>Red flag or immediate referral, children with any of the following neurological symptoms and signs:</td>
<td><strong>Wilms’ Tumour</strong> (All Ages)</td>
</tr>
<tr>
<td>- new-onset seizures</td>
<td>Red flag referral:</td>
</tr>
<tr>
<td>- cranial nerve abnormalities</td>
<td>- a child or young person presenting with haematuria</td>
</tr>
<tr>
<td>- visual disturbances</td>
<td><strong>Soft Tissue Sarcoma</strong> (All Ages)</td>
</tr>
<tr>
<td>- gait abnormalities</td>
<td>Red flag referral:</td>
</tr>
<tr>
<td>- motor or sensory signs</td>
<td>- presenting with an unexplained mass at almost any site that has one or more of the following features. The mass is:</td>
</tr>
<tr>
<td>- unexplained deteriorating school performance or developmental milestones</td>
<td>- deep to the fascia</td>
</tr>
<tr>
<td>- unexplained behavioural and/or mood changes.</td>
<td>- non-tender</td>
</tr>
<tr>
<td>Red flag referral, children aged 2 years and older, and young people, with:</td>
<td>- progressively enlarging</td>
</tr>
<tr>
<td>Persistent headache where you cannot carry out an adequate neurological examination in primary care.</td>
<td>- associated with a regional lymph node that is enlarging</td>
</tr>
<tr>
<td>Red flag referral, children aged younger than 2 years with any of the following symptoms suggestive of CNS cancer:</td>
<td>- greater than 2 cm in diameter in size</td>
</tr>
<tr>
<td>- abnormal increase in head size</td>
<td><strong>Bone Sarcomas</strong> (All Ages)</td>
</tr>
<tr>
<td>- arrest or regression of motor development</td>
<td>Referral, children or young people with:</td>
</tr>
<tr>
<td>- altered behaviour</td>
<td>- rest pain, back pain and unexplained limp (a discussion with a paediatrician or X-ray should be considered before or as well as referral)</td>
</tr>
<tr>
<td>- abnormal eye movements</td>
<td>- persistent localised bone pain and/or swelling, and X-ray showing signs of cancer. In this case refer urgently.</td>
</tr>
<tr>
<td>- lack of visual following</td>
<td><strong>Retinoblastoma</strong> (Mostly Children Less Than 2 Years)</td>
</tr>
<tr>
<td>- poor feeding/failure to thrive</td>
<td>Red flag referral, children with:</td>
</tr>
<tr>
<td>- squint, urgency dependent on other factors.</td>
<td>- a white pupillary reflex (leukocoria). Pay attention to parents reporting an odd appearance in their child’s eye</td>
</tr>
<tr>
<td></td>
<td>- a new squint or change in visual acuity if cancer is suspected. (Refer non-urgently if cancer is not suspected.)</td>
</tr>
<tr>
<td></td>
<td>a family history of retinoblastoma and visual problems. (Screening should be offered soon after birth.)</td>
</tr>

Northern Ireland Referral Guidance for Suspected Cancer – Red Flag Criteria

Issue date: Aug 2022 (updates to Breast and Prostate PSA thresholds)
Source: NICE Referral Guidelines for Suspected Cancer; 2005 (CG27) and (NG12) 2015.

Appendix 1

NICaN Lower GI Suspected Cancer Pathway

- Symptoms of suspected Lower Gastronintestinal Cancer
  - Abdominal and Rectal examination

- Request qFIT and include result with referral
  - Key test in prioritising patients for colonoscopy
  - For rectal/anal/abdominal mass or proven iron deficiency anaemia qFIT result can follow referral

- Recommended Investigations
  - Full Blood Count, U&E, Iron Profile (including Ferritin)
  - Coeliac Profile (if Iron Deficiency anaemia, weight loss or diarrhoea)

- Document fitness for investigation
  - Patient has been advised that further investigation may be required and appears agreeable to straight to test

High Risk Lower GI Symptoms – Based on NICE NG12/Scottish Guidance

- Rectal, Anal or Abdominal Mass
  - Arrange qFIT

- Proven Iron Deficiency Anaemia (IDA)
  - Arrange qFIT

- Persistent Change in bowel habit towards loose motions for >4 weeks
  - ATTACH qFIT result

- Rectal Bleeding
  - Please check qFIT result before referral for any of these symptoms
  - If qFIT positive ≥7 µgHb/g
  - If qFIT negative <7 µgHb/g

- Abdominal pain with weight loss
  - (Upper GI referral might be more appropriate)

- Normocytic anaemia +LOWER GI symptoms

Refer as RED FLAG Gastro/colorectal/general surgery depending on clinical judgement/individual Trust

IMPORTANT: Please state qFIT result on the referral or for rectal/anal/abdominal mass or proven iron deficiency anaemia indicate that it has been requested (secondary care will be able to access on ECR)

SAFETY NETTING - if persistent or progressive symptoms exist on primary care review consider RED FLAG referral. Secondary care may downgrade to URGENT upon triage.

Notes
- If patient unable to provide qFIT where requested, please make this clear in referral
- If patient does not return qFIT where requested, please reassess and safety netting
- For further guidance please refer to associated supporting documentation on NICaN website: qFIT for lower GI symptoms

Northern Ireland Cancer Network (hsni.net)

Version 22.6.21 – Pathway subject to review at 18 months following evaluation
